## Water

Water is our life. Water is essential for our survival. Water is tasteless, orderless and colorless liquid. Water is chemical combination of oxygen and hydrogen atoms. An atom is tiny bit of matter which is too small to see. Water is made up of one atom of oxygen and two atoms of hydrogen.

Water can be classified into three states. They are solid, liquid and gas. Ice is the solid form of water. Water which is available in oceans, seas, rivers, ponds etc is liquid state of water. Water vapour is the gas form of water.

Water is essential for our livelihood. We need water to drink. We should drink clean water. Not all available water is safe to drink. Water in lakes and rivers may be polluted. It may contain harmful chemicals or germs which can cause different diseases. We can make water pure by cleaning lakes and rivers. We can drink water after boiling the water by adding some chemicals to kill the germs.

Water is used in our home for different purposes like drinking, washing clothes and utensils, irrigating lands, bathing, etc. Water is also used in every sector. Water provides routes for transportation. Water is the habitat of different water animal. Water is used to generate electricity. Water is essential for everyone and everywhere. So, we should clean water resources from being polluted. Thus protection and preservation of water resources is necessary for all.

## Corona Virus

Corona Virus (COVID- 19) cause illness from common cold to severe respiratory syndrome. It is caused by SARS-COV-2. It is a new strain which was not seen in human beings before.

The viruses were first identified in Wuhan city of China, but now it has spread to more than 100 countries of the world with the major outbreaks in central China, South Korea, Italy and Iran. Many people died and still people are suffering and some people have also been recovered.

The virus spreads between people in a similar way to influenza through coughing or sneezing. The affected persons generally suffer for 5 days but it may range for 2 to 14 days. There is no specific antiviral treatment of this diseases till now.

We can apply some precautions to be safe from people who are suffering, washing hands frequently, avoiding hand-shake, monitoring, wearing masks while outside and self-isolation for 14 days from people who are suspected to suffer, etc.

## World Environment Day

As we know, Environment Day is celebrated on 5<sup>th</sup> June every year in order to preserve our environment. We also celebrated world environment day on that day. Students from class 3 to class 10 were involved in that plantation program. Our teachers had brought many plants from nursery. They provided four plants for each class. Our plantation program was started by our respected principle sir. After then, all students of respected classes started to plant the plants. We planted all the plants and then watered it. Not only have that from that day onwards we all are watering the plants and also taking cared of that plants. After celebrating the environment day, we all knew that we should plants the trees and not only that we should preserve those plants and trees every day to make our world beautiful.
